

e-Scola Training Service

Magicom Ltd. and **Observans Ltd.**, as organizations committed to education, improvement of human resources, and active learning, have founded the **e-Scola Training Service**.

The **e-Scola Training Service** operates as a framework of knowledge related to adult training, content development and info-communication, which brings the design and realization of learning processes within organizations to an absolutely new base.

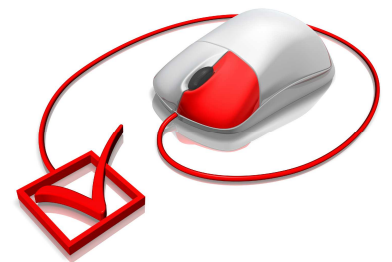

In what fields could you benefit from e-Scola?

- ❖ **"Netikett"** – general rules and standards for emailing and internet usage in companies
- ❖ **Information security** (or quality and environmental management) awareness improvement
- ❖ Fundamentals of standard based management systems (**"ISO" based systems like ISO 9001, 14001, 27001**)
- ❖ Effective communication of **company policies and procedures and their changes** (i.e. communication of company IT policy, regular training for external sales agents and representatives)

Why is it worth using the e-Scola Training Service?

- ❖ Because there are frequent trainings concerning the majority of colleagues, in order to maintain standard-based management systems (e.g.: ISO 9001);
- ❖ Because it is important to have one tool for administering training and education events, and also their related costs;
- ❖ Because we seek for cost-effective training schemes collectively;
- ❖ Because it is a so-called blended learning, where traditional education schemes are supported by electronic surfaces;
- ❖ Because our active learning-supporting tools and our dual training material development model increase the efficiency of training.

What do we offer for you?

- * We assess the education needs, and customize the training material;
- * We compile the program, and the training material in any required fields, supporting active learning;
- * We establish the whole training process in a traceable way;
- * We test the electric curriculum prepared for self-learning by involving the client;
- * As part of the curriculum we create an exam test and its technical environment;
- * By trainings free of charge or with favorable conditions, we introduce various tools supporting learning;
- * We ensure users (persons to be trained) to access the curriculum;
- * We make sure that the curriculum and tests are up-to-date, and necessary modifications are done;
- * We ensure a curriculum and a training environment that inspires learning and acquiring knowledge;
- * We provide objective evidences (authentic log files) of training programs for the purpose of external audits at the company (review of clients and certifying bodies).
